

Middle Newaukum Creek Watershed

Upper Newaukum Creek Watershed

WETLAND INVENTORY MAP  
City of Enumclaw - 1998  
SCALE: 1"=1000'

The wetland areas shown on this inventory map were identified from aerial photos taken by Walker and Associates in April 1998. These areas have not been delineated using the methods defined by the City of Enumclaw, the Washington Department of Ecology, or the US Army Corps of Engineers. The Soil Survey of King County Washington Area C (prepared by the Soil Conservation Service in 1973) was used to determine if hydric soils might be present at the noted locations. No field data collection has been completed for any of the sites shown on this map. All portions interested in properties that have wetlands shown on this map are advised that a complete delineation, incorporating data collected in the field should be completed prior to designating any areas as wetland. This map is advisory only. We are aware there may be wetlands on other properties lying within the limits of the boundaries shown on this map. It is highly probable that not all of the wetlands present within the City Limits or Urban Growth Boundary were observed along the aerial photo analysis. If there are no wetlands shown on this map within the property of interest, that does not mean there are no wetlands on site. It is always advisable to retain a wetlands specialist to review on-site conditions and determine the presence or absence of wetlands within the boundaries of the property of interest.
